

Movie Library

We want to create a database for movies.

It should contain detailed information about movies, as well as detailed information about leading actors, writers, and directors.

From the library, we should be able to learn the release date of the movie, genre, available language, IMDb score and country of origin. (Informations like Genre, Location, Country can be connected with more than one movies.)

We also want to include detailed information about the people who produced the movie (actors, writers, and directors), such as their name, surname, gender, birth date, and nationality.

Every actor, writer and director can be working with more than one movie.

Also, we want to include the streaming services where the movie can be found, as well as the languages in which the movie is available (dubbed or with subtitles).

And last but not least, we should be able to have a section for Awards

Functional Requirements:

- 1-) Show the list of Streaming Services that selected Movies is available.
- 2-) Show the list of Movies from a selected Country
- 3-) Show the list of multiple genres of selected Movie.
- 4-) Show the list of Actors, Writers and Directors, and filter them by Gender or Nationality.
- 5-) Show the list of Movies that directed by selected Director.
- 6-) Show the list of Movies that are available with dubbed English .
- 7-) Show the list of Languages that selected Movie is available, and filter the dubbed ones.
- 8-) Show the list of Movies that has more than 7.0 on iMDB.
- 9-) Show the list of Movies which has the Best Movie/Film Award..
- 10-) Show the list of Movies which has award and more than 6.0 on iMDB.
